Time: Wed, Oct. 21, 15:00-16:00

Venue: Room 106, SCMS

Abstract: In this talk we shall introduce some well known conjectures in the theory of finite groups. These conjectures are nowadays often called local-global conjectures. Recently, substantial breakthroughs and significant progress have been achieved toward the verification and reduction of these long-standing conjectures. Based on our related work, we shall discuss some key reduction theorems and typical proof strategies.
