TOPOLOGICAL CYCLIC HOMOLOGY AND THE CARTIER-WITT STACK

Speaker: Jingbang Guo
Shanghai Center for Mathematical Sciences

Time：Fri, May 26th, 10:00 - 10:30
Venue: Room 102, SCMS

Abstract:

In this talk, the interconnection between topological cyclic homology, algebraic K-theory, and (absolute) prismatic cohomology is to be briefly touched upon. In particular, the insight revealed by the consideration of the Cartier-Witt stack will be emphasized. Also some possible directions of further development will be presented.
