

## ***STABLE DEGENERATIONS OF FANO FIBRATION GERMS***

**Speaker: Linsheng Wang**

**Shanghai Center for Mathematical Sciences**

**Time: Sun, Sep. 28<sup>th</sup>, 15:30-16:00**

**Venue: Room 110, SCMS**

### **Abstract:**

In this talk, I would like to introduce the stable degeneration conjecture of Fano fibration germs (relative version), which can be viewed as a unification of the algebraic Hamilton-Tian conjecture of Fano varieties (global version) and the stable degeneration conjecture of klt singularities (local version). If time permits, I will briefly introduce the proof. This is a joint work with Jiyuan Han, Minghao Miao, Lu Qi and Tong Zhang.
